

FMS Holter Kits

Features:

FMS Holter Kits include everything needed for patient monitoring.

- Complete ready-to use kits save time and reduce costs
- Eight high quality kit configurations all flexibility and efficiency in choice
- Kits are conveniently packed in an easy to open individual bag
- Applicable for short and long term monitoring

Product Description:

FMS Holter Kits are designed to help monitor patient's heart activity. They are used to determine how the heart responds to normal activity, as well as in situations where heart related problems may exist.

The Holter Kit can be used after a heart attack, to diagnose heart rhythm problems, or when starting a new cardiac medicine. It could help in the diagnosis of the following: atrial fibrillation, atrial tachycardia, palpitations, slow heart rate, and other heart related issues.

(20 kits per case)
