

INTRODUCING PROGUARD CLASSIC

THE #1 LEAD AND LATEX GLOVE, RE-ENGINEERED TO PERFECTION

FIT. FORM. FUNCTION.

The Proguard Classic is a highly specialized sterile attenuation glove used during fluoroscopic, interventional procedures. We've improved our proprietary mixing process to produce a lighter, more protective glove all while maintaining its affordability.

Made from high quality lead and latex elements, the Proguard Classic achieves greater protection with thinner, more tactile fingertips. This translates to improved dexterity and comfort while reducing hand fatigue. The glove interior has superior slip-coat technology for hassle-free donning.

In short, the Proguard Classic is the #1 radiation attenuation glove.

PROTECTION PROPERTIES

Glove	Attenuation (60kVp)	Thickness
Classic PG1	47%	± 0.22mm
Classic PG2	56%	± 0.28mm
Classic PG3	62%	± 0.38mm
