

Alcohol Free

safeHands[®] sanitizer

...is the **ONLY** patented **Alcohol-FREE** hand sanitizer formula on the market!

safeHands alcohol-free hand sanitizer formula works synergistically to achieve a comprehensive barrier of protection against germs. Our proprietary formulation contains a unique skin conditioner that allows for extended protection against germs. safeHands is an acceptable replacement to hand washing due to the approved FDA active ingredient BAC that enables significant "microbe killing power" while moisturizing the skin.

Kills 99.99% of all germs

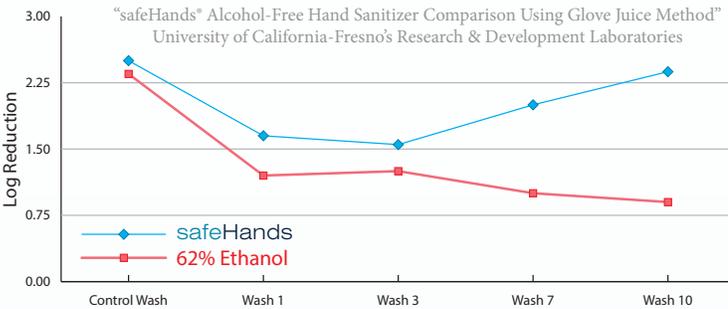

Fifteen second kill time

Three year shelf life

2x

Twice the uses of alcohol gel per bottle

Independent lab tests have shown that safeHands alcohol-free hand sanitizer continues killing more germs the more times it is used unlike other alcohol-based sanitizers which lose effectiveness.

safeHands is a Safe and Acceptable Replacement to Hand Washing

Reasons to Switch to Alcohol-Free:

- ❖ Alcohol's skin drying effect prevents staff adherence to hand sanitizer compliance policies.
- ❖ Alcohol sanitizers are highly flammable Class 1B combustible liquids.
- ❖ OSHA regulations and local fire codes require special considerations when using and storing alcohol sanitizers.
- ❖ CDC has issued ingestion alerts for alcohol sanitizers over child, patient, and resident safety concerns.
- ❖ Alcohol sanitizers damage floors and equipment leading to costly repairs.
- ❖ Competitor brands are sticky in comparison to safeHands.
- ❖ Most other hand sanitizers have expiration dates of less than two years.
- ❖ Food safety workers are required to rinse after using alcohol-based sanitizers. The presence of water, food, fatty materials, feces, or blood on hands can significantly reduce the effectiveness of an alcohol-based hand sanitizer.
- ❖ Some sanitizers contain FDA-banned ingredients such as formaldehyde and triclosan.
